

# COLD POOP TO HOT POWER

The Alaska AD Team has experience:

- Working with Alaskan Native Villages
- Optimizing anaerobic digestion
- Optimizing anaerobic digestion microbiology in cold climates
- Constructing in cold, remote areas
- Developing small, remote renewable energy systems
- Constructing remote, high-altitude digesters

Established to rise to these Challenges:

**Why can't anaerobic digestion be used to efficiently and effectively provide green energy and improved sanitation in Alaska Native communities?**

**And with that innovation and knowledge gained – why not multiply sustainable AD Energy use in Alaska, the Arctic, and cold and high places everywhere?**
