

Solar Utilization and Commercialization Coalition for Energy Efficiency Devices (SUCCEED): A Pipeline to Support Solar Energy Innovation.

The goal of this proposed project is to create and sustain a Solar Utilization and Commercialization Coalition for Energy Efficiency Devices (SUCCEED) in the Lower Rio Grande Valley (RGV) region of Texas. The approximately 1.5 million people located in the RGV are historically underrepresented and underserved in the renewable energy sector. This program seeks to cultivate and develop this innovation ecosystem while taking advantage of the solar energy efficiencies of the area to promote entrepreneurship and enhance the energy innovation cluster in this region.
