

Torrent Energy is the vital, missing technology step the Hydrogen Economy needs to advance towards Zero CO<sub>2</sub> emissions.

All businesses need to support themselves to pay the bills & hire people;

Power Plants need to reduce their emissions, hydrogen blending does that.

The neighborhoods around a power plant are usually disadvantaged.

Torrent places manufacturing supported by the power plant business, then expands the capacity , so local economics expand because we broke the ‘commercial conundrum’.

Now with the hydrogen business and jobs in place, it can expand to support other industry needs, supplying this new clean fuel as a resource available in the area needing improvement and advantage.

## A new technology platform to produce Clean Hydrogen

- 🌀 Green Technology, produces ZERO CO<sub>2</sub> Emissions
- 🌀 A critical stepping-stone to achieving a clean hydrogen future,
  - 🌀 Leveraging today's energy resources and infrastructure.
- 🌀 Flexible design enables multiple applications; Production, Point-of-use, Recycling.
- 🌀 Technology R&D complete, Proven in 16 sister installations.
- 🌀 Production-Scale Equipment Operational w/hundreds of hours of run-time.
- 🌀 **Low CAPEX** and **OPEX** execution requirements, proven scalability.
- 🌀 Multiple revenue streams from single technology.
- 🌀 Experienced Technology and Business team building partnerships and growth.

1 megawatt; 1200 kg/day layout
