

The Elmore Bolling Tech + Interpretive Center

Location: Lowndesboro, AL

Size: 36kw

Type: Off-grid Solar + Storage

Goals:

- Introduce Renewable Energy to the Community
- Create In-Person Educational Opportunities For Renewable Energy
- Launch Educational Campaign
- Inspire Demand for Renewable Energy
- Identify Community Partners for Future Projects

Project Overview:

LBT is bringing renewable energy to Lowndesboro, AL ! We have partnered with the Elmore Bolling Initiative to support the renovation of a Reconstruction Era schoolhouse, into a community tech center + civil rights museum. This project will be located between several historic sites, and is expected to receive extensive foot traffic.

The project will be a 36kw off-grid carport solar + storage system. This is a new concept for many in the area, so we will be launching an educational campaign in tandem, in order to familiarize locals with the truth about renewable energy and how it can make improve their quality of life. This will be the first of several intended projects. Learn about our work at
