Community Energy Innovation Manufacturing Ecosystem Project Outline

- Use the project funds to launch clean energy product manufacturing in vulnerable communities while providing paid, on-the-job training to future electricians
- CONCEPT phase funding will be used to establish a full-time manufacturing facility that will employ electricians-in-training from local training centers
- PROGRESS Phase funding will be used to hire at least three employee-trainees to manufacture and deliver mobile, clean energy solutions to at least two highly-impacted communities by November 2024

Powering ONYX's Future Vision

- Using self-generated sales, continue to expand its manufacturing operations developed through the *Community Energy Innovation Prize* with further integration with local electrician training programs
- Improve its offerings and services; continue to provide clean power to vulnerable communities and to displace fossil-fuel use in the mobile power market segment
