

# Expanding the Re-X supply chain by revolutionizing the use of mass timber products in the single-family housing sector

*Transforming discarded wood into valuable building materials to extend its life cycle while sequestering carbon for centuries to come.*

*Before and After: harvesting discarded wood byproduct on the ground from forest thinning to reduce wildfires and improve forest health.*

*Engineered mass timber panels taking shape, utilizing advanced technology for sustainable, long-lasting construction.*

*The assembly of a beautiful, resilient home using innovative mass timber construction methods for a sustainable future.*
