Transforming appliance waste into repair opportunities with accessible resources

Address barriers: Documentation, procedures, tools, mentors, in a networked community of self-help owners. Scale to support makerspaces and repair technicians.

Intercept Early: Work with municipalities to connect owners with resources for repair before they resort to replacement.

Empower Entrepreneurs: Training and resources to make small appliance repair a viable employment path. Connect them to high value proposition repairs and a steady flow of work through municipal waste interception programs.

Close the circle: Rating products by MTBF, serviceability, open documentation and company policies on part support and owner repair.
