Solar

Grid

Battery

Application
- Energy Meter
- Remote Control
- Real time cost of energy (compare to other timing in the day)
- Carbon footprint cost of now vs other timing in the day)
- Suggested timing for cost
- Suggested timing for Carbon footprint

Solar Energy is within access to the most population but for its limitation of 24 hours availability and intermittence when its available.

Battery and EV address this problem but not everyone have an EV and, battery cost is high for true reliability.

Diesel back up is expensive, bulky and polluting

Navia introduces a powerful concept to attain resilience with solar energy and EV and/or battery using AI technology. Navia solution will deliver power to critical loads during emergencies. Navia solution will save energy cost and carbon footprint during normal days.
