

FRAM ENERGY

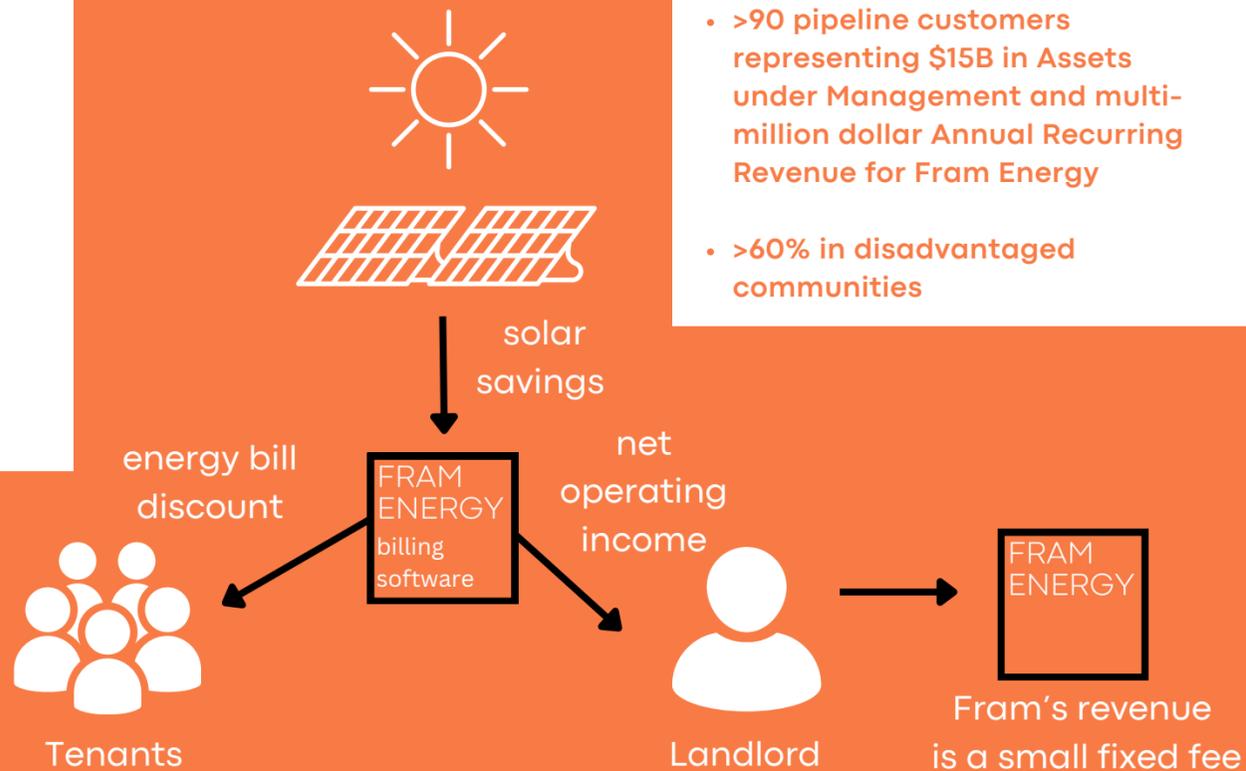

Bringing solar to the underserved rental market.

Rental homes represent a >400 TW/year unrealized opportunity for the solar industry

How it works

- Fram Energy works with landlords or solar developers sell on-site solar to the tenants of their multifamily rental properties.
- Our software becomes the tenant's energy bill portal, allowing us to pass on solar savings to both the landlord/developer and the tenant.
- Our revenue is a small fixed monthly per-unit fee

Traction

- First project launched May 2024, first revenue earned July 2024
- >90 pipeline customers representing \$15B in Assets under Management and multi-million dollar Annual Recurring Revenue for Fram Energy
- >60% in disadvantaged communities
