Insitu: Accelerating Solar Development on Brownfields

Community-first software platform dedicated to surfacing brownfield sites for solar development:

- ✓ Enables community members (landowners, county reps, economic development organizations) to rapidly generate and evaluate site proposals for renewables without writing a single line of code

- ✓ Provides high quality site recommendations – pre-vetted for landowner consent and community approval – to developers

- ✓ Leverages proprietary models and curated datasets to quantify environmental liabilities, permitting, and accelerated interconnection pathways

- ✓ Uniquely designed for complexities of brownfields (mine lands, landfills, retiring power plants, industrial sites)

Communities hosting brownfield sites

↑ Ability to proactively generate redevelopment proposals for sites
