

AgroboPV | integrated agrivoltaics

Product Overview

- Agrivoltaics or “solar-sharing” has the potential to create a symbiotic relationship and optimize land use between solar generation and agriculture
- However, agrivoltaic research requires extensive monitoring and experimentation
- By combining agrivoltaics and precision farming through an agricultural bot that navigates along a solar racking system, **AgroboPV** is uniquely positioned to enable this data collection

Key Benefits

Integrated racking navigation system

Open-source technology

Precise soil variation measurement

Scaled to size for PV environment

New research opportunity
