

Maxout Renewables

2,000,000 American homes have solar arrays.

Almost all of them stop producing power during an outage, when you **NEED** it.

The Evergrid is the affordable retrofit that keeps solar power flowing when the grid is out.

The Evergrid

Solar power when you need it most

- Provides enough surge capacity to run refrigerators and air conditioners
- Detachable battery module for nighttime power
 - Installs easily for whole-house power
- Costs less than a generator
- Works with any residential PV system
