

Request for Technical Assistance

Reverse Auction for Solar PV Projects

We are confident in the ability to build the Minimum Viable Product for the Reverse Auction for Solar PV projects, but we would like some assistance in the recruitment of validators for the solution.

We would like the help of testers and validators:

- We would like to work with companies that are familiar with Request for Proposals (RFPs) for solar projects and Power Purchase Agreements (PPAs) to help us synthesize the information and automate the creation of RFPs equivalent checklists and PPAs.
- We wish to understand better how we can work with CCA's (Community Choice Aggregation entities). One of the RFPs being synthesized was issued by the CCAs in the Silicon Valley area and is a good example of group buy.
- We would like the help of PowerSource or other companies to recruit Solar Installers to our platform as trial customers. We have approached local installers and they showed some interest in the solution.
