

Speed Albedo™ - The Albedo Amplifier

Bifacial solar arrays work at their best with albedo provided by fresh snow, achieving gains of 25 to 30% over similarly placed mono-facial arrays.

Speed Albedo is a highly reflective, ground cover made from eco-friendly materials, that mimics the albedo of fresh snow every day at a price that makes it a cost-effective solution for any size array.

Highlights

- Has an albedo of 80-90%
- Made from durable, low cost, environmentally sustainable materials
- Reduces maintenance costs
- Improves return on investment for bifacial arrays
